

Traditional sanitizer/disinfection approaches like chlorine bleach and quaternary ammonium compounds, or quats, are toxic to humans, corrosive to materials and harm the environment they are released to. Klortab NaDCC tablets that produce hypochlorous acid (HOCL) when added to water are the less toxic alternatives to chlorine bleach & quats.

- Because bleach is a hypochlorite and is highly reactive, non-pure, unstable and sensitive to light and temperature. Quaternary ammonium compounds & chlorine bleach irritate or cause asthma.
- Bleach concentrate begins to reduce the activity from the moment it's manufactured and, within a month, easily loses a third or more of its activity. When diluted bleach is effective for only hours.
- In addition, bleach and quaternary ammonium compounds are highly corrosive to metals and other surfaces, extremely toxic to the environment, and unsafe for humans to handle or inhale its fumes.

DOMESTIC USE:

During the cleaning at the houses, 1 tablet added to 5 liter water, if necessary an anionic detergent can be added to the solution and at the same time cleaning and disinfection can be achieved.

Generally the disinfection of wall tiles, floor tiles, bathtub, showers, sink, kitchen bench, chopping board, deep freeze, fridge, trash cans, siphons, taps, hearths, interior, doorknobs and doors of cabinets etc. by wiping with a cloth soaked in solution. After the wiping process is completed, the remaining solution is poured into the wash basin or toilet to prevent the accumulation of possible microbes in the pipes.

Pillows, pillow cases and duvet covers etc. of the infected patients are ready for use after leaving the solution for 1 night.

WARNING: Can bleach. For the slurry and kitchen cloths, yellow cloths, dishwashing sponges, floor cloths, aprons etc. 2 tablets are thrown into 5 liters of water.

TOILET DISINFECTION: The toilet water is drained. After refilling, 2 tablets are discarded. After the tablet is removed, it is wiped with a brush while it is being emptied again.

DISINFECTION OF BABY MATERIALS: Baby feeding bottles, teats, caps, plastic toys, milk pumps; 1 tablet is discarded in 5 liters of water. All material is immersed in the solution so that there is no air bubbles. It is left in solution for 30 minutes or as needed. Used after rinsing.

Concentrated Klortab NaDCC tablets weigh 95% less per case than liquid concentrate disinfectant. Making it more ergonomic to lift, and uses less plastics and cardboard, creating less solid waste.
